

MetaAccess offers Secure Access to network, data and applications, with advanced compliance checks of end-point devices. This MetaAccess Product Guide provides a logical methodology to customize the solution for specific requirements.

Choose from "Per Device" or "Per Named User"

Per Device

Each unique device under MetaAccess Control

Per device pricing is a good option it you primarily use one device for access to your applications, making it easy for an organization to track usage.

Per Named User

Each unique user under MetaAccess Control

Per named user is a good option if you typically use or share up to three devices in your workplace, such as an engineering lab environment.

Start with the MetaAccess Base Platform

Endpoint Compliance

- Security Application Compliance
 Check: 3rd Party Anti-Malware,
 Encryption, etc.
- Native cloud and / or On-Prem deployment (On-Prem requires Pro-Services)
- OS Compliance Check: Missing Patches, User Passwords, etc.
- Remediation Page Custom Branding
- Assess vulnerabilities and patch thousands of endpoint applications
- Custom Endpoint Check
