OPSWAT.

MetaDefender NDR

Network Detection and Response

MetaDefender NDR is purpose-built to empower your SOC team and enhance their visibility by providing them with Enterprise-wide situational awareness to identify attacks as well as breaches as they occur.

With advanced analytical techniques, incident triage, and the ability to retrospectively identify threats as new Tactics, Techniques, and Procedures (TTPs) are discovered, MetaDefender NDR leverages Deep File Inspection® (DFI) to analyze content beyond the application layer and ensure your assets remain protected even against the most sophisticated of threats targeting your Enterprise.

Core Competencies

- Data Loss Prevention
- Actionable and Automated Threat
- Threat Analytics

- Breach Detection
- Automated Theat Hunting via RetroHunting

Differentiators

Deep File Inspection, RetroHunting, Machine Learning

Intelligent Orchestration Through Strategic 3rd Party Integrations

Comprehensive Suite of Multi-Scan Technologies

High-Speed Data Acquisition and Analysis

Continuous Monitoring for Proprietary and Sensitive Information In-Use, At-Rest, or In-Motion

Features and Benefits

Network and File Analysis at Scale

Cloud-assisted Threat Protection

IOC Extraction and Analysis

Force Multiply your SOC
