

OPSWAT.

OPX LABS

Experience cyberattacks. Discover what stops them.

OPSWAT's Critical Infrastructure Protection Labs are live, immersive IT and OT environments where your team can experience hands-on demonstrations of real malware running against real hardware.

San Francisco | Tampa | Washington, D.C. | London
Veszprém | Timișoara | Petah Tikva | Dubai
Hanoi | Ho Chi Minh City | Tokyo

OP/X LABS

Experience Real Cybersecurity

The MetaDefender™ Platform is OPSWAT's AI-powered, prevention first cybersecurity platform for IT, OT, and cross domain environments. Our labs showcase that whether deployed in cloud, on premises, or in air gapped networks, OPSWAT secures every file, device, and data transfer entering or moving through critical systems.

Real Threat Scenarios

Live malware detonation, USB attacks, and attacks on industrial controllers.

Cybersecurity In Action

See how the MetaDefender™ Platform prevents threats in an architecture like yours.

Your Use Cases

You pick the demonstrations. The agenda follows your environment.

Learn

- The Real Attack Surface: files, email, removable media, networks, and cross-domain boundaries
- Why weaponized files walk past signature-based tools, and what sanitization does to them
- How to move files and patches into isolated OT networks without opening a path back out
- What defense-in-depth looks like mapped onto your own architecture
